ISIS - Documentation #850

Need better documentation for cnetdiff

2012-05-22 03:56 PM - Mark Rosiek

Description

The documentation for cnetdiff needs to be improved. Including the format of the DIFF file *.net.DIFF

I need better documentation on the .net.DIFF file

Also, I see no difference in the .txt file report and the .pvl reprort file.

Mark, I'm assuming that your are trying to run the Isis3: cnetdiff application?

Is the application running for you okay and you are posting a request for improved documentation?

#2 - 2012-06-20 01:07 PM - Mark Rosiek

Tammy, Thanks for letting me know that this was updated. I did not have the monitor button selected.

I ran JIGSAW on Apollo Metric images. The first set was SPICEINIT using the LOLA DEM and the second set was SPICEINIT with a sphere. I wanted to check if the output nets were different for the two cases. So I tried to use CNETDIFF, this was probably wrong.

To set the tolerance there needs to be a fille specified by the DIFF keyword.

This might only be a program that is suppose to be used by developers and it might not be applicable to what I wanted to do.

I found a way to dump the networks and compare them in EXCEL.

This ISIS prorgam was not designed as a general application and I was trying to use this program in a way that was not the intention of the program designer.

Dumping the networks and comparing them in EXCEL answered my need.

Mark says this is no longer necessary. The cnetdiff program is a system utility program originally designed only to tell the user if there is a difference, not what the diffs were.

#5 - 2012-09-11 01:58 PM - Mark Rosiek

I am closing this because I found another solution.
